

# EMEP/EEA Manure management N-flow tool

TFEIP Agriculture and Nature  
Expert Panel

Richard German  
11/05/2022

1. Brief history of the N-flow tool
2. Description of the tool – scope and functionality
3. Getting help and support
4. Future updates and additional functionality
5. Prompts for discussion

# Brief history of the N-flow tool

## 2009 – 2016 EMEP/EEA Guidebook

	A	B	C	D	E	F	G	H	I	J
1	<b>Step 3. Calculation of Total N excretion deposited in buildings, on outdoor yards and on grazed land</b>									
2	<b>Input data</b>									
3		Number of livestock	100							
4		N Excretion kg	105							
5		% TAN excr	60							
6		Housed period, days	180							
7		% excreta on yards	25							
8										
9	<b>Calculations</b>									
10	Equation 5	m_grazN	3991.4							
11	Equation 6	m_yardN	2625.0							
12	Equation 7	m_buildN	3883.6							
13	Total		10500.0							
14	Check		0.000							
15										
16	<b>Step 4. Allocation of organic-N and TAN excretion between buildings, outdoor yards and grazing</b>									
17	<b>Input data</b>									
18	Equation 8	m_graz,TAN	2394.9	m_grazN	3991.4					
19	Equation 9	m_yard,TAN	1575.0	m_yardN	2625.0					
20	Equation 10	m_build,TAN	2330.1	m_buildN	3883.6					
21	Total		6300.0		10500.0					
22	Check		0.000		0.000					
23										
24										
25	<b>Step 5. Estimate amounts of TAN deposited in buildings as slurry or FYM</b>									
26	<b>Input data</b>									
27		Proportion of livestock housed on slurry-based system (%)	50							
		Proportion of livestock housed on FYM-based system								

- Simple, concise structure in Excel demonstrating the Tier 2 N-flow method
- Only 2 worked examples, for 1 year
- An important purpose was educational to aid understanding of the method, to facilitate shift from Tier 1 to Tier 2
- Available (to all) from:

<https://www.eea.europa.eu/publications/emep-eea-guidebook-2013/part-b-sectoral-guidance-chapters/4-agriculture/3-b-appendix-b/view>

# Brief history of the N-flow tool

## 2019 EMEP/EEA Guidebook update

Category	Code	Activity	Pollutant	Livestock category	Units	Notes	1990	1991	1992	1993	1994	1995	1996
<b>3B Manure Management NH3, N2O, NO, N2 emissions</b>													
<b>Step 2 Calculate the total annual excretion of N by the animals (Nex; kg AAP-1 a-1)</b>													
Animal Weight_Sheep	3B	Animal Weight	-	Sheep	kg		50	50	50	50	50	50	50
Nex_Sheep	3B	Nex	N	Sheep	kg N/1000 kg animal mass day-1		0.85	0.85	0.85	0.85	0.85	0.85	0.85
Number of livestock_Sheep	3B	Number of livestock	-	Sheep	AAP		1	1	1	1	1	1	1
Nex per head	3B	Nex per head	N	Sheep	kg N/head/year		15.5125	15.5125	15.5125	15.5125	15.5125	15.5125	15.5125
<b>Step 3 Calculation of total N excretion deposited in housing, on outdoor yards and on grazed land</b>													
Housed period_Sheep	3B	Housed period	-	Sheep	Days		30	30	30	30	30	30	30
Proportion of N excreted as TAN_Sheep	3B	Proportion of N excreted as TAN	-	Sheep	Fraction		0.50	0.50	0.50	0.50	0.50	0.50	0.50
Prop excreta on yards_Sheep	3B	Prop excreta on yards	-	Sheep	Fraction		0.02	0.02	0.02	0.02	0.02	0.02	0.02
m_graz_N	3B	$m_{graz\_N} = N_{ex} \times N_{ex}$ (5)	N	Sheep	kg		13.95	13.95	13.95	13.95	13.95	13.95	13.95
m_yard_N	3B	$m_{yard\_N} = N_{ex} \times N_{ex}$ (6)	N	Sheep	kg		0.31	0.31	0.31	0.31	0.31	0.31	0.31
m_housed_N	3B	$m_{housed\_N} = N_{ex} \times N_{ex}$ (7)	N	Sheep	kg		1.25	1.25	1.25	1.25	1.25	1.25	1.25
Total Nex	3B	Total Nex	N	Sheep	kg		15.51	15.51	15.51	15.51	15.51	15.51	15.51
Number of livestock * Nex per head	3B	Total Nex	N	Sheep	kg	OK	0.00000	0.00000	0.00000	0.00000	0.00000	0.00000	0.00000
<b>Step 4 Allocation of organic-N and TAN excretion between housing, outdoor yards and grazing</b>													
m_graz_TAN	3B	$m_{graz\_TAN} = TAN \times m_{graz\_N}$ (8)	N	Sheep	kg		6.98	6.98	6.98	6.98	6.98	6.98	6.98
m_yard_TAN	3B	$m_{yard\_TAN} = TAN \times m_{yard\_N}$ (9)	N	Sheep	kg		0.16	0.16	0.16	0.16	0.16	0.16	0.16
m_housed_TAN	3B	$m_{housed\_TAN} = TAN \times m_{housed\_N}$ (10)	N	Sheep	kg		0.62	0.62	0.62	0.62	0.62	0.62	0.62
Total TAN	3B	Total TAN	N	Sheep	kg		7.76	7.76	7.76	7.76	7.76	7.76	7.76

- Updated by Aether in 2018/19, with QA/QC from TFEIP and comparison with previous tool.
- Still Excel, but easier to integrate with other compilation files (i.e., more of a “tool”), following feedback.
  - Restructured to include a time series
  - Tabs for **all** default livestock categories

- Integration of emissions from biological treatment of manure (5B2), and NO<sub>x</sub> and N<sub>2</sub>O emissions from manure applied to soils / deposited whilst grazing

- Time series makes it easier to handle varying input parameters over time (e.g. mitigation measures)

- Available (to all) from: [https://www.eea.europa.eu/publications/emep-eea-guidebook-2019/part-b-sectoral-guidance-chapters/4-](https://www.eea.europa.eu/publications/emep-eea-guidebook-2019/part-b-sectoral-guidance-chapters/4-agriculture/manure-management-n-flow-tool/view)

[agriculture/manure-management-n-flow-tool/view](https://www.eea.europa.eu/publications/emep-eea-guidebook-2019/part-b-sectoral-guidance-chapters/4-agriculture/manure-management-n-flow-tool/view)

3Da3 urine and dung whilst grazing	✓	✓	✓	✗	✗	✗
5B2 Biological treatment of manure	✓	✗	✗	✗	✗	✗
3Da1, 3Da2b+c other fertilisers applied to soils	✗	✗	✗	✗	✗	✗
3Db – 3Df, 3F, 3I Other agricultural sources	✗	✗	✗	✗	✗	✗

# Description of the N-flow tool

## Functionality

# DEMO

### Input

- Activity data and parameters for N-flow by year
- Can either enter CS parameters, or use defaults from 2019 Guidebook

### Output

- “Flat” format summary tab by detailed NFR category, pollutant and year. Not precisely NFR format, but easy to link to.

### Checks

- Automatic system of checks on N-balance, sense-check of manure fractions etc.

# Description of the N-flow tool

## Adapting / configuring the tool

- Being an Excel file, any number of modifications can be made by the user.
- Modelling of mitigation / abatement measures is not currently part of the tool, so requires “pre-calculation” of abated EFs and other parameters elsewhere.
  - Guidance on this produced during 2021 on this via a Commission project
- Local systems or livestock categories can be reflected by adding additional tabs (straightforward), or additional steps within the calculations (trickier).

Ultimately, the user is responsible for making sure modifications work properly!

# Getting help and support

## Guidance and technical documentation:

- The “Guidance” tab in the spreadsheet is the first point of reference for understanding how to use the tool.
- It is designed to be used alongside the Guidebook chapter 3B, so to understand the parameters required and the logic of the algorithm, refer to pages 21-28 in that chapter.
- Commission guidance from 2021 support project to address “FAQs”(?)

## Enquiries:

- Feedback and questions can be directed to the TFEIP secretariat: [TFEIP@aether-uk.com](mailto:TFEIP@aether-uk.com)
  - These will then be passed on to the relevant person, e.g. staff involved in developing the tool, or guidebook chapter author

# Future updates and additional functionality

## To discuss!

### Future updates to keep up with Guidebook

- **Version control:** difficult for compilers to keep updating the entire tool version they're using, if already heavily integrated into systems, and/or heavily modified.
- Keen to support and update if a need is demonstrated
  - **But updates require funding!**

### Additional functionality

- Several additional features and updates have been suggested / drafted following feedback from users, but not yet released – depends on this discussion!

# Prompts for discussion

## Key Questions – we welcome your thoughts!

- **Additional features**
  - Is there any point increasing the scope? Where would a natural boundary be?
  - Should the tool have more built-in flexibility to suit different circumstances, or are needs too varied?
  - Should mitigation impact be included in the tool? (2021 project concluded not)
- **Is there a more (cost) efficient way to support compilers than further updates to the entire official tool?**
  - By providing advice / support to modify existing spreadsheets to add functionality and update EFs etc?
  - More targeted updates to specific parts of tool? E.g. publishing an updated default EFs tab to copy in?
- **Is there value in a different kind of tool?**
  - E.g. an EF pre-calculator to capture impact of abatement, to complement the AgrEE tool?

# Prompts for discussion

## Key Questions – we welcome your thoughts!

- **More generally:**
  - Is there a continued role for an excel tool alongside the AgrEE tool?
  - If so, what kind of tool? and how should it be kept up to date?

# Pros and cons

Pros	Cons
Offline, so no GDPR or privacy issues	Offline, so difficult to roll out changes
Available to all to download, so transparent and accessible	Smaller in scope than AgrEE tool
In Excel, which is flexible and easy to integrate into other compilation files	Although working visible, quite complicated to follow in Excel
Easily visible calculations
